## Responsive scissor craftsmanship

Scissor users and scissor makers.  
Can a maker truly get the user's perspective?

Our scissors are the culmination of responding to the desires of our users one after another.

However, our focus was specializing on scissors for hair dressers.

In the extreme workplace of saving lives, mistakes cannot be permitted.

In that workplace, there are scissors.

Healers of illness, sufferers of illness.

We desire to let what we have cultivated to serve this purpose.

### Product Features

The screw and its supporting mechanism are important components of scissors. This model uses a double-bearing that embodies our experience and innovation. Creating a small triangular bevel in the stationary blade, the scissors have non-slip function enabling cutting to the desired accuracy.

### Applications

From cutting suture thread to finely dissecting organs such as the pancreas.

### Specifications

Scissor performance depends on the quality of the steel and the basic design. High grade blade steel is both hard and pliable.

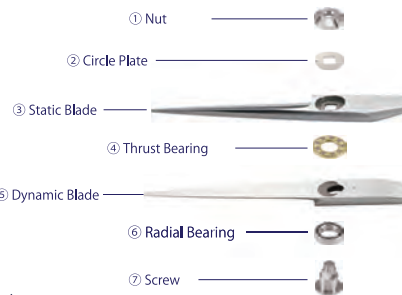

This scissor features a basic design with a "3D pivot" supporting the fulcrum point of the lever with a bearing.

※This is not comply with European and U.S. legislation.

CTN Treatment
